Lab 09 submission details

FoodBridge, an intelligent food rescue coordination and resource allocation platform

Course: Software Engineering Laboratory (PTPS) **Team:** AdiByte5 **Member:** Adithyan S Nair, 24BAI1621 **Date:** 28 October 2026

This page collects the links, setup steps and credentials required for the final submission. The repository README carries the full project description and design notes.

Deliverables

Deliverable	Where
Presentation (PPTX)	docs/AdiByte5_FoodBridge_Presentation.pptx
Presentation (PDF)	docs/AdiByte5_FoodBridge_Presentation.pdf
Source code	github.com/25-26-WIN-BCSE301L-SOFTWARE-ENGINEERING/26-27-fall-se-lab-projects-AdiByte5
Public copy of the code	github.com/AdiByte5/FoodBridge (anyone with the link can view)
Demo video	Uploaded directly to Teams, max 10 minutes, link set to anyone with the link
Live application	Not publicly deployed. Runs locally at http://localhost:5173

Run the project locally

Requirements: Java 21, Node.js 20 or newer, npm, and MySQL 8 or newer.

```
cd FoodBridge
./scripts/start-all.sh
open http://localhost:5173
```

The script starts MySQL on 3307, the Spring Boot API on 8080 and the React app on 5173. Stop everything with `./scripts/stop-all.sh`. Without MySQL, run the API with `./mvnw spring-boot:run -Dspring-boot.run.profiles=h2`.

Environment variables

Variable	Default	Purpose
FOODBRIDGE_DB_URL	jdbc:mysql://127.0.0.1:3307/foodbridge	Database connection
FOODBRIDGE_DB_USER	foodbridge	Database user
FOODBRIDGE_DB_PASS	foodbridge123	Demo password
FOODBRIDGE_JWT_SECRET	development key	JWT signing key, replace before deployment
FOODBRIDGE_DEMO_SEED	true	Load the sample dataset on first boot
FOODBRIDGE_ENGINE_AUTOALLOCATE	true	Match new donations automatically

Properties live in `backend/src/main/resources/application.properties`. Do not commit real passwords or keys.

Demo accounts

Role	Email	Password
Administrator	admin@foodbridge.org	Admin@123
Donor, Spice Route Restaurant	donor@foodbridge.org	Donor@123
Recipient, Akshaya Patra	recipient@foodbridge.org	Recipient@123
Recipient, Chennai Food Bank	foodbank@foodbridge.org	Recipient@123
Volunteer, Ravi Kumar	volunteer@foodbridge.org	Volunteer@123

What the demonstration shows

- A donor registers surplus food. The allocation engine matches a recipient immediately and shows the score and reason.

- The administrator reviews the ranked organizations and can change the recipient with a written reason.

- The recipient accepts, the closest volunteer is assigned, and the delivery moves through pickup, transit and confirmation.

- Reports and the audit trail update, including a system record of the automatic decision and an audit entry for the override.

Verification

`cd backend && ./mvnw test` runs fifteen tests on an in-memory H2 database: eligibility filters, weighted scoring, fairness, the food-safety arrival rule, role access, automatic matching, the waiting queue, the override and volunteer assignment.

Submission checklist

[ ] Repository shared with the course account and opens without a login.

[ ] README shows setup, environment variables and run commands.

[ ] Presentation named AdiByte5_FoodBridge_Presentation and uploaded as PPTX or PDF.

[ ] Demo video under ten minutes, uploaded directly to Teams.

[ ] Video and slide links set to Anyone with the link can view.

[ ] Sample data restored once before recording.
